## **DETAILED ACTION**

### ***Claim Objections***

Claim 18 is objected to because of the following informalities: in line 1 – continuous—is misspelled. Appropriate correction is required.

### ***Allowable Subject Matter***

Claim 16 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 103***

Claims 1-15,17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bolger. This patent discloses the ball milling of metal powder to form metal flakes in the presence of polytetrafluoroethylene and a stearic acid. Zinc is a well known metal powder. Thus, it would have been obvious for one of ordinary skill in the art to modify Bolger by treating zinc powder since zinc is a well known metal powder. The remaining limitations would then have been obvious design choices as they solve no stated problems. For example, the amounts of each material used would have been obvious based on routine experimentation and the desired final product. Also, lithium stearate is a well known stearic acid and it's use within the process would have been obvious once

it was known to use a stearic acid as in Bolger. Note for claim 10 the powder is still not being positively claimed, as it is in claim 16.

Claims 18,19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bolger as applied to claim 1 above, and further in view of either Schreiner or Kaufman. Bolger does not cool his material which may result in an undesired product. Both Schreiner and Kaufman solve this problem by showing a similar process including the continuous cooling of material in a ball mill. In order to properly treat the material, it would have been obvious for one of ordinary skill in the art to modify Bolger by continuously cooling the material, taught to be desirable by both Schreiner and Kaufman.

### ***Response to Arguments***

Applicant's arguments filed 6/20/05 have been fully considered but they are not persuasive. Claim 1, for example, of Bolger, does not limit the material in the patent to aluminum or bronze i.e. there is no reason why a zinc powder could not be used within the patent. Concerning the cooling of the material during a ball milling process, clearly the secondary references show this process step.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3725

In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
